

Name : Harshad Sanjay Teli.

Roll No : 15

Batch : B1

Lab Test 1

1. Tourist Information Portal

Create a webpage titled “Tourist Information Portal” using HTML `<iframe>`.

Create two frames:

Frame 1 – Places

- Mumbai
- Delhi
- Goa
- Jaipur

Frame 2 – Place Information

- Display information about the selected place in this frame.

Requirements:

- Use `<a>` and `<iframe>` tags.
- Do not use CSS.
- Do not use tables.

Input:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Tourist Information Portal</title>
</head>
<body>
  <iframe name="Places" width="49%" height="500px" srcdoc='
    <h1>Places</h1>

    <ul>
      <li><a href="data:text/html,<h1>Welcome To Mumbai</h1><br><table
border=`n`><tr><th>Name</th><th>Climate</th></tr><tr><td>Mumbai</td><td>Warm and humid
with a primary rainy monsoon season from June to September</td></tr></table>"
target="Place">Mumbai</a>
      <li><a href="data:text/html,<h1>Welcome To Delhi</h1><br><table
border=`n`><tr><th>Name</th><th>Climate</th></tr><tr><td>Delhi</td><td>Delhi has a humid
subtropical climate that borders on a hot semi-arid climate, marked by extreme variations
between summer and winter temperatures</td></tr></table>" target="Place">Delhi </a></li>
      <li><a href="data:text/html,<h1>Welcome To Goa</h1><br><table
border=`n`><tr><th>Name</th><th>Climate</th></tr><tr><td>Goa</td><td>Goa features a hot
```

```
and humid tropical monsoon climate with warm temperatures hovering between 20°C and 35°C
all year round, as detailed by the Climate of Goa portal. </td></tr></table>"
target="Place">Goa </a></li>
    <li><a href="data:text/html,<h1>Welcome To Jaipur</h1><br><table
border=`n`><tr><th>Name</th><th>Climate</th></tr><tr><td>Jaipur</td><td>Jaipur features a
hot semi-arid climate characterized by long, extremely hot summers, a monsoon season with
moderate rainfall, and short, mild winters, as detailed on Wikipedia.</td></tr></table>"
target="Place">Jaipur</a></li>
'></iframe>
<iframe name="Place" width="50%" height="500px"
    srcdoc='Clik To right any one options'>
</iframe>
</body>
</html>
```

Output:

Q2. Books with Image Map

Insert an image of a **bookshelf or collection of books** and define two clickable areas using `<map>` and `<area>` tags.

Each area should link to a different website or internal page.

Example:

- Click on **Fiction Books** → opens fiction.html
- Click on **Science Books** → opens science.html

Requirements:

- Use `<img>`, `<map>`, and `<area>` tags.
- Define at least **two clickable areas**.
- Each area should open a different webpage.

Input:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title> bookshelf or collection of books</title>
  <style>
    body img area{
      cursor: pointer;
    }
  </style>
</head>
<body>
  <center><h1> bookshelf or collection of books</h1></center>
  
  <map name="BookMap">
    <area shape="rect" href="./fictional.html" coords="500,2000,200,100"
title="_blank">
<area shape="rect" href="./science.html" coords="800,2000,200,100" title="_blank">
  </map>
</body>
</html>
//Fiction Book page

<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
</head>
```

```
<body>
  <h1>The about Aura</h1>
  <p>The story follows humanity's first major attempt at interstellar colonization. A giant generation ship, designed as a massive Stanford torus (a ring-shaped space habitat), leaves Earth in the year 2545 CE. It is heading toward the Tau Ceti star system, which is 11.9 light-years away, traveling at a fraction of the speed of light.
</p>
  <p>The narrative begins nearly 160 years into the voyage as the ship is finally decelerating toward its destination. Over multiple generations, the ship's closed-loop ecological biomes (which mimic various Earth environments) have begun to break down, face severe resource depletion, and experience technical glitches. The crew must navigate these compounding crises while preparing to land on a habitable, uncharted moon they name Aurora.</p>
</body>

<body>
  <h1>About the Book</h1>
  <p> Science Fiction Novels: These are made-up stories grounded in strict, real-world science. Unlike space fantasies (like Star Wars), these books strictly follow the laws of physics, real mathematics, chemistry, and biological engineering to tell realistic stories about space exploration and the future (e.g., Kim Stanley Robinson's Aurora and Andy Weir's The Martian).</p> </body>

</html>
```

Output:

bookshelf or collection of books

When the click on the first page then show the book info of the fiction book

The about Aura

The story follows humanity's first major attempt at interstellar colonization. A giant generation ship, designed as a massive Stanford torus (a ring-shaped space habitat), leaves Earth in the year 2545 CE. It is heading toward the Tau Ceti star system, which is 11.9 light-years away, traveling at a fraction of the speed of light.

The narrative begins nearly 160 years into the voyage as the ship is finally decelerating toward its destination. Over multiple generations, the ship's closed-loop ecological biomes (which mimic various Earth environments) have begun to break down, face severe resource depletion, and experience technical glitches. The crew must navigate these compounding crises while preparing to land on a habitable, uncharted moon they name Aurora.

When the click on the Second page then show the book info of the Science book

About the Book

Science Fiction Novels: These are made-up stories grounded in strict, real-world science. Unlike space fantasies (like Star Wars), these books strictly follow the laws of physics, real mathematics, chemistry, and biological engineering to tell realistic stories about space exploration and the future (e.g., Kim Stanley Robinson's Aurora and Andy Weir's The Martian).
